1. Executive Summary

GCC360 CRM is a next-generation Customer Relationship Management (CRM) platform designed to solve the "Communication Overload" and "Data Fragmentation" problems faced by modern enterprises. Unlike traditional CRMs that serve as passive databases, GCC360 is an AI-Native Intelligence Hub. It actively monitors communication channels (Email, Social Media, Voice Calls), extracts actionable leads using Large Language Models (LLMs), and provides executive-level narratives through its suite of specialized AI Agents.

2. Problem Statement

Modern businesses struggle with manual data entry fatigue, information silos, and passive data that lacks actionable insights. GCC360 solves this by automating 90% of lead ingestion and providing proactive AI narratives.

3. Technology Stack

Frontend: React 18, Vite, TypeScript

Backend: Node.js, Express, Prisma

Database: PostgreSQL (Supabase)

AI: Groq Llama 3, Vapi Voice, AI Extractor

Authentication: Biometric Face-ID, JWT

4. AI Agent Audit

1. Dashboard Narrator: Executive summaries
2. Admin Insights: Productivity analysis
3. Data Query Agent: Natural language search
4. AI Email Drafter: Automated follow-ups
5. Lead Verifier: Fraud and quality scoring
6. Voice Intelligence: Call summaries and sentiment
